

Ripple Peperomia

Peperomia caperata

Beginner Friendly

Light

Place in an area with diffused light. This plant loves partial shade!

Water

Allow soil to dry between waterings, but don't let it stay dry for too long!

Environment

This plant will do well in typical household conditions. Avoid drafty areas.

Toxicity

This plant is nontoxic and a great option for homes with pets.

Common Plant Problems

Cupped Leaves / Brown Leaf Tips

This is a common problem when plants aren't getting enough watering or watering is very inconsistent.

Yellowing Leaves

This can occur with nutrient deficiencies or overwatering. Keep an eye on the plant's soil moisture. If it is saturated, allow the soil a chance to dry out before its next watering.

Leggy Growth

If it looks like your plant is stretching its stems or leaves as far as it can toward a window - it needs more light!

Brown Spots

For some plants, too much light can cause sunburn on its leaves. This is represented by light brown spots surrounded by yellow halos.

Wilting / Fainting

Wilting can be caused by unsuitable temperatures. Consider researching your plant to find out if an area it's in is too cold or warm. If a plant begins to faint or droop its leaves (pothos is good at this!), it's an SOS sign for water.

Insect Problems

Often times, insects appear when plants are unhappy in their conditions. If you notice insect presence or damage, double check its needs. Try isolating the plant and treat it with neem oil or insecticidal soaps until the insects are no longer present.
