

Prayer Plant

Maranta leuconeure

Beginner Friendly

Care

LIGHT

Medium amounts of bright, indirect light. Avoid direct sunlight, as it may burn the leaves.

WATER

Dip your finger into the soil and water when the first couple of inches are dry. Do not let soil dry out completely. Drainage is very important too!

ENVIRONMENT

Thrives in normal household conditions.

TOXICITY

This plant is nontoxic and pet friendly!

FUN FACT

This plant gets its common name because of its habit of folding its leaves upward at night, like praying hands.

Common Plant Problems

Cupped Leaves / Brown Leaf Tips

This is a common problem when plants aren't getting enough watering or watering is very inconsistent.

Yellowing Leaves

This can occur with nutrient deficiencies or overwatering. Keep an eye on the plant's soil moisture. If it is saturated, allow the soil a chance to dry out before its next watering.

Leggy Growth

If it looks like your plant is stretching its stems or leaves as far as it can toward a window - it needs more light!

Brown Spots

For some plants, too much light can cause sunburn on its leaves. This is represented by light brown spots surrounded by yellow halos.

Wilting / Fainting

Wilting can be caused by unsuitable temperatures. Consider researching your plant to find out if an area its in is too cold or warm. If a plant begins to faint or droop its leaves (pothos is good at this!), its an SOS sign for water.

Insect Problems

Often times, insects appear when plants are unhappy in their conditions. If you notice insect presence or damage, double check its needs. Try isolating the plant and treat it with neem oil or insecticidal soaps until the insects are no longer present.
